LAND DATA

Introducing the World Bank Land Data Map

We are excited to launch the World Bank Land Data Map at the 2025 World Bank Land Conference. This interactive tool is designed to make land data more accessible, user-friendly, and actionable—helping to support countries and communities in achieving land tenure security for all.

The Land Data Map features eight maps with comprehensive data layers and related stories to explain how land data can be used for:

Strengthening Land Systems	Unlocking Jobs & Growth	Optimizing Land Use
E-Governance Women's Rights Cities	Job Creation Revenue Generation Financial Inclusion	Livable Planet Energy Transition

These maps highlight the importance of land systems in creating a world free of poverty on a livable planet. The Land Data Map also demonstrates how land data and systems are critical to achieving results by highlighting relevant World Bank Group Scorecard indicators and outcomes.

The Land Data Map is a testament to the World Bank Group's commitment to creating and sharing data-driven analytics to shape development, create scalable projects, and inform the global development discourse. The data used in the map is drawn from publicly accessible development data, many of which are included in the World Bank's Data360 project—an integrated set of curated development data from across the World Bank Group and its partners.

We invite you to explore the Land Data Map and see how it can help you understand and leverage land data for development. By making land data more accessible and actionable, we can drive better outcomes for communities around the world. Check out the Land Data Map today and discover how data can transform our approach to land systems and development.
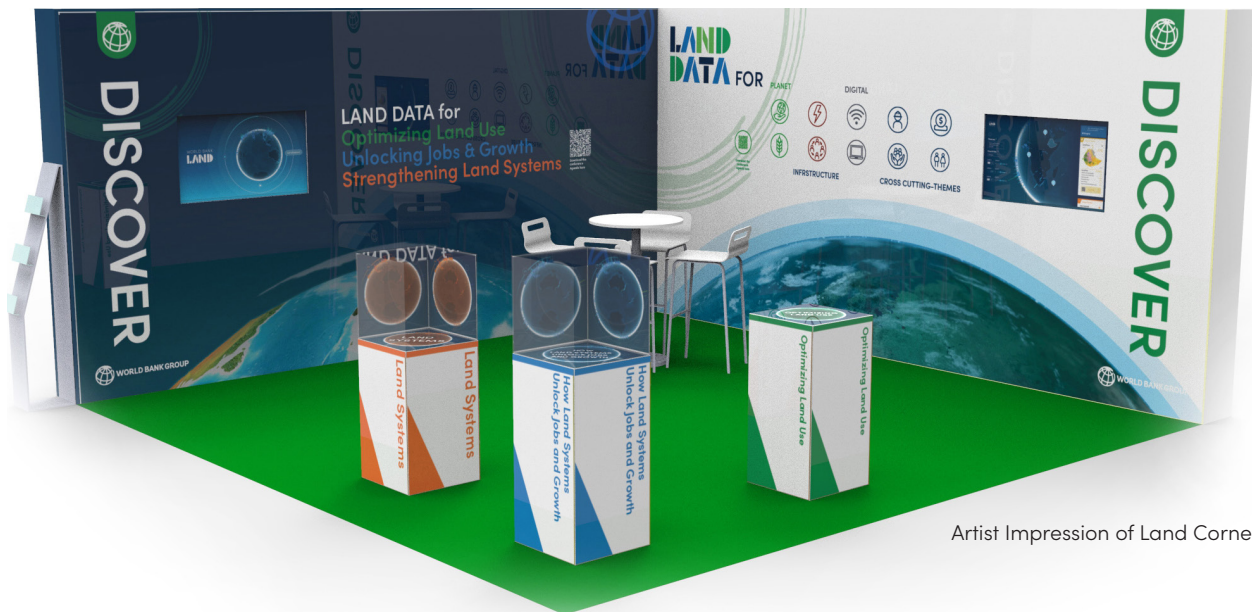

The World Bank Land Data Map was funded with UK International Development from the UK government. The UK government is a multi-year Champion Sponsor of the World Bank Land Conference. Their generous contribution in 2025 enabled the development of the Land Data Map.
